

**PLEASE NOTE THAT THE POSTERS WILL BE PRESENTED ELECTRONICALLY IN A COMPUTER SCREEN. YOU WILL NOT PREPARE A HARDCOPY POSTER BUT YOU WILL UPLOAD A pdf FILE INTO A PROPER WEB ADDRESS.**

**E-POSTER SETTINGS:**

**File format: .pdf**

**File orientation: PORTRAIT 9/16 (1080x1920)**

**Maximum dimensions: 20 MB**

**GENERAL**

**In principle your image might be of whatever size, provided that you respect the PORTRAIT mode of 9:16 (vertical format). Different modes will be visualized as well, adapting to the screen, but will not be optimal for the users. As a thumb rule, please note If you can read it clearly on your laptop screen, it will be clear on the Symposium screen as well.**

**ASPECT**

**Although your image is displayed on a screen so that it may be enlarged or reduced at your convenience (in other words you can see details of whichever dimensions), we do suggest you to make the most relevant portions of your results, visible and readable at a first glance on the standard size of the screen. You may use the screen enlargements to the details useful for a face to face discussion.**

**FILE SIZE**

**It is suggested to create file up to 20 MB: this max size makes the file clearer to readers. Larger files are still working but are slower to open.**
